## TECHNICAL PROJECTS

**URL Shotgun** | Backend URL Shortener with Click Analytics (Spring Boot REST API) Live Demo | GitHub Repo

*Tech Stack: Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, JUnit 5, Mockito, JaCoCo, JMeter, React*

- Developed a **Spring Boot** backend for **URL Shotgun**, a full-stack URL shortener, using **Java, Spring Data JPA/Hibernate,** and **MySQL**, generating unique 6-character short codes with **HTTP 302** redirection.
- Designed **RESTful APIs** for URL creation, management, and analytics; implemented **click analytics** recording IP address, User-Agent, referrer, timestamp, and total click count per short URL.
- Implemented centralized exception handling and request validation, returning structured **HTTP 400** and **404** error responses.
- Wrote service-layer unit tests with **JUnit 5** and **Mockito** and controller-layer tests with **MockMvc**, achieving **74% instruction coverage** measured with **JaCoCo**.
- Benchmarked APIs with **Apache JMeter** (**0% errors**, 15 ms average response time over 50 samples); removing a redundant existence-check query in URL creation cut average latency to **13 ms** and response-time variance by **~39%** over 150 samples.
- Integrated a responsive **React (Vite)** frontend with the Spring Boot REST APIs using **Axios**.
